FOR INSURANCE BROKERS

Clients who can answer the cyber form, *with the evidence*.

FourWinds checks a small business from outside and puts in place four of the basics the proposal form asks about. Each fix is proven by a later scan or a dated document FourWinds has checked, in an evidence pack the client can hand you at renewal. Anything else, such as email filtering, is the client's own dated answer, labelled as theirs. In 2022, 37.5% of Irish firms with 10 to 49 staff had cyber cover, against 22.6% across the EU.

AT RENEWAL

Four of the basics the form asks about.

Two-step sign-in

Asked for remote access, email included. In Chubb's glossary, a VPN or shared key does not count.

Backups

Whether backups of key systems are immutable, kept offline, or reached only through separate accounts.

Email security

Whether suspicious mail is quarantined, attachments are sandboxed, and SPF is enforced.

Incident plan

On Chubb's standard form: a formal incident response plan, tested at least once a year.

39%
of Irish SMEs surveyed said they had two-step sign-in on all business-critical apps.

26%
said they had an automated backup process.

A DMARC policy of p=none asks receiving mail servers to do nothing with mail that fails the check.

22%
said they had a response plan or a tested one.

WHAT FOURWINDS DOES

A free check, the fixes, then the proof.

Step 1 · Free

The outside check

At portal.fourwindsdigital.com/start, with no account. It looks at the business's email from outside (SPF and DMARC), the one part of the form a scan can answer, then its website and what privacy, cookie and AI law asks of it.

Step 2 · From €2,950

Secured and proven

One programme: SPF and an enforced DMARC policy (and DKIM on Microsoft 365), two-step sign-in for all staff, a tested backup restore with its date, a rehearsed incident plan, cookie consent, the privacy notice and fixes for the scan's other security findings.

Step 3 · The proof

Second scan and pack

A scan fix is done only when a later scan passes. The pack shows every check before and after, and sets out the evidence behind eleven questions insurers commonly ask (FourWinds' own set, not an insurer's form), with its source and date, or names the gap.

Each pack also gives FourWinds' own score against CyFun Basic. It is not a CyFun label.

What you get

- Clients who answer the form from a dated record.
- Each item labelled by its proof: a scan, a checked document or the client's own word.
- Gaps named, so any no shows up before signing.
- Each pack is stored exactly as issued, so the client can later show what was sent.
- A sample pack, for a made-up business, on request.

How a referral works

1. Send the client to the free check, or introduce them to Eoghan or Oscar by email with the client's agreement.
2. FourWinds quotes the client and does the work.
3. The client brings the pack to the renewal.
4. You place the cover as you do now. The insurer, the terms and the advice stay with you.

FourWinds does not advise on insurance cover, recommend insurers or policies, fill in or submit proposal forms, or deal with insurers or claims. FourWinds is not an insurance intermediary and is not regulated by the Central Bank of Ireland. No referral fee is paid or received, in either direction.
