FOURWINDS DIGITAL

Leave the systems to us. You *run* the business.

For Irish small businesses: we connect the tools you already use, automate the copying between them, and keep it all running every month.

Systems integration, automation and regulatory compliance for Irish SMEs

HOW IT WORKS

Built once, then kept *running*.

BUILT ONCE	Connect	The tools you already use, connected so each figure is typed in once.	p. 03
BUILT TO ORDER	Automate	The jobs that repeat run on a schedule, and custom software where nothing fits.	p. 06
MONTHLY	Run	We keep it running, fix it when it breaks, and report on it every week.	p. 07
THE RECORD	Compliance	Secured and proven: every gap found, fixed, and proven for your insurer.	p. 10
TO START	The check	A written report on what anyone can see from outside your business.	p. 12

CONNECT · BUILT ONCE

Typed in *once*.

We connect the tools you already use and fix what gets in the way. Each piece is a fixed price.

Connections

Systems that talk

Bookings, payments, accounts and your CRM connected where staff retype data.

Email

Email security

SPF and DMARC corrected, a month of reports read, then enforced.

Measurement

Tracking and consent

Analytics, ad conversions and the cookie banner, set up and tested together.

Enquiries

One enquiry record

Every form, booking and call in one place, with a reply tracked against each.

Websites

Sites and landing pages

Fast on a phone, every form tested by sending one, on your own account.

Search and access

Speed and search

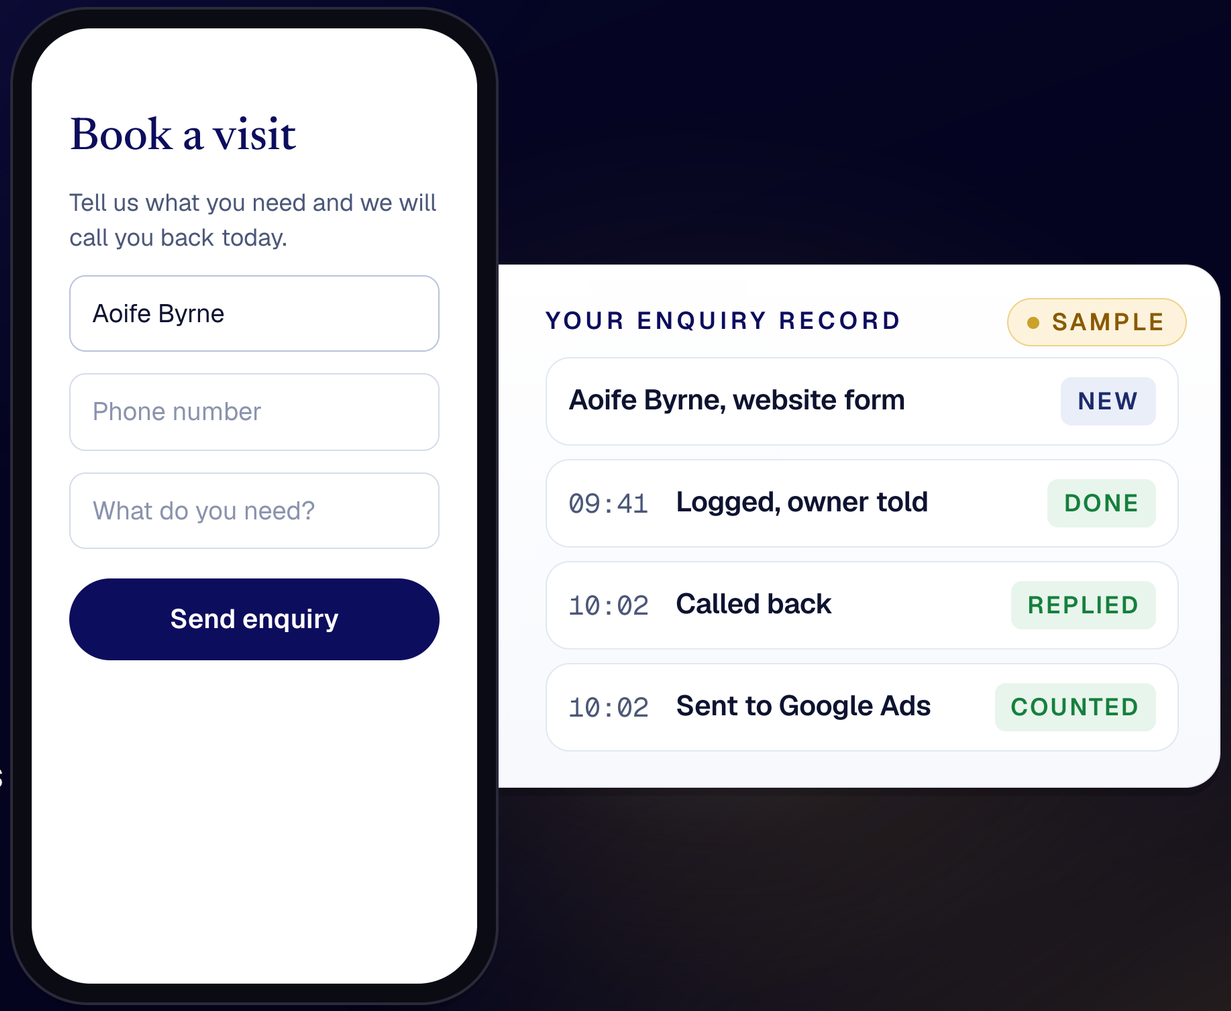

Page titles, structured data, image weight, form labels and contrast.

WEBSITES AND LANDING PAGES

Every enquiry *arrives*.

A landing page or a full site that loads fast on a phone and gets every enquiry to you.

- Load time measured on a real handset before handover
- Every form submitted for real, to prove the enquiry lands
- Domains, DNS, mailboxes and hosting set up properly
- Analytics and the cookie banner tested together
- Built on your account: the code and the domain are yours

TRACKING AND CONSENT

Know what each *euro* returned.

Analytics counts visits. We record what the visit led to, through your cookie banner, and tell the ad platforms.

1

The visit

An ad click, a search or a referral, noted on arrival.

2

The answer

The cookie banner's yes or no, recorded and obeyed.

3

The outcome

The enquiry, booking or sale, logged in your record.

4

The ad platform

Told what worked, for visitors who agreed.

Sales sent from your server as well as the browser, for visitors who agreed

Conversions reconciled against what was invoiced

Checked against live events, every month

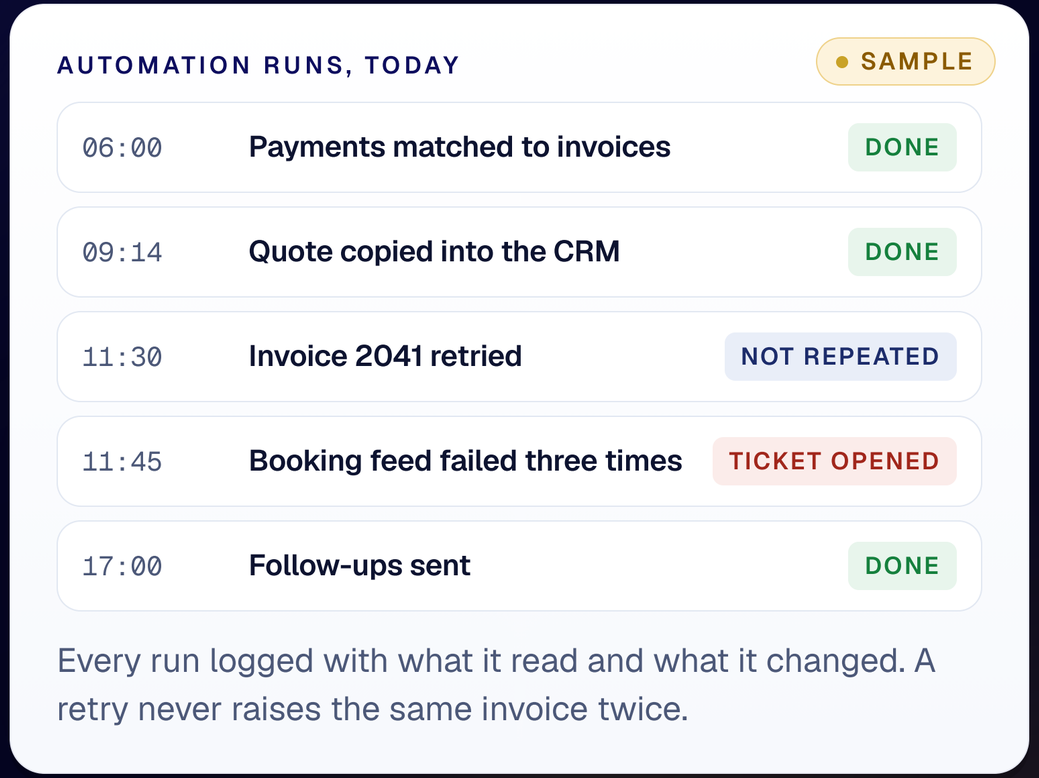

AUTOMATE · CUSTOM SOFTWARE

Built for how *you* work.

The jobs that repeat run on a schedule: quotes, invoices, reports and follow-ups. Where no tool fits, we build one.

- Booking and payment systems, with deposits
- Client portals and internal tools
- Integrations, with one system the source of truth for each field
- Quotes, invoices, reports and follow-ups run on a schedule
- Documented and handed over, on your accounts

The Trading Online Voucher from your Local Enterprise Office part-funds booking, payment and customer-facing systems.

RUN · MONTHLY

We keep it *working*.

One monthly fee: the tracking checked, the record kept current, things fixed when they break, and a report every week.

Monthly

Run

- Tracking checked against live events every month
- A weekly report: enquiries, sales and what came back
- Every enquiry logged in your client portal
- Monthly re-scans, with your evidence and compliance record kept current
- Fixed when it breaks, with a weekly office hour and a quarterly review

Monthly

Run with ads

- **Everything in Run, and**
- Google and Meta ads managed, reviewed monthly against a written checklist
- Conversions reconciled against what was invoiced
- Creative and audiences tested each month
- Built on your own ad account, so it stays yours

THE WEEKLY REPORT

Every number on *one screen*.

- Google Ads
- Google Analytics
- Your enquiry form
- Stripe payments
- Your bookings
- Your invoices

YOUR SCREEN ANSWERS, EVERY WEEK

What did the ads cost, and what came back?

Spend against the sales and enquiries it produced.

Where did each enquiry come from?

Ad, search, a referral or a phone call, counted once.

What is booked, and what is owed?

Bookings, deposits and unpaid invoices side by side.

What changed since last week?

One sentence on top, with the figures underneath.

THE CLIENT PORTAL · COMES WITH RUN

One login. Every *moving part.*

Delivery status, reports, invoices and support in one account, beside the work we run for you.

Part 1

Reporting

Your figures, with their history kept.

Part 2

Automation

Your scheduled jobs, with every run logged.

Part 3

Knowledge base

Answers from your own documents, citing the clause.

Part 4

Compliance

Your record, with every statutory deadline counted.

Also in the same place: Projects · Documents · Invoices · Support · Office hours

COMPLIANCE · THE RECORD

The record, kept *current*.

What applies to you under GDPR, the EU AI Act and the Accessibility Act, who owns each item, and the date it applies from.

- Every duty has an owner and a date
- Every finding cites the article it comes from
- Kept current in your portal as your systems change

WHAT THE RECORD TRACKS

Staff trained on the AI tools they use
AI Act, Article 4 · applies since 2 Feb 2025

A chat assistant says it is an AI
AI Act, Article 50 · applies since 2 Aug 2026

Your website and checkout work for everyone
Accessibility Act · applies since 28 Jun 2025

Access requests answered within a month
GDPR, Article 12 · since 25 May 2018

An exploited vulnerability reported within 24 hours
Cyber Resilience Act, Article 14 · applies since 11 Sep 2026

COMPLIANCE · SECURED AND PROVEN

Found, fixed, and *proven*.

One programme at one fixed price. We find every gap from outside, fix it along with the basics insurers ask about, and prove it with a second scan.

Step 1

Scan

Your email, website, cookies and privacy notice, read from outside. No access needed, and every finding comes with its evidence.

Also fixed price

A compliance assessment: GDPR, the EU AI Act, and a DPIA where the law asks for one.

ISO 27001 readiness.

Step 2

Fix

- Everything the scan found
- DMARC, so inboxes refuse email forged in your name
- Cookie consent that asks before anything tracks
- A privacy notice that matches the site
- Two-step sign-in on every staff account
- A backup with a tested, dated restore
- An incident plan, with a practice run

Step 3

Prove

- A second scan, with every finding closed and dated
- A score against the NCSC's Cyber Fundamentals, Basic level
- An evidence pack for your insurer and your customers' security questionnaires

Then, in Run

Monthly re-scans, restore tests every quarter, and the pack refreshed for each insurance renewal.

400 IRISH SMALL BUSINESSES, CHECKED 2 OCTOBER 2026

Most problems are visible *from outside*.

93%

of their mail domains do not tell inboxes to refuse email forged in their name

30%

of their websites set tracking cookies with no consent tool at all

41%

of their websites have no link to a privacy notice on the homepage

DNS lookups on the mail domains of 400 Irish small businesses across six trades, and 103 of their websites loaded in Chrome.

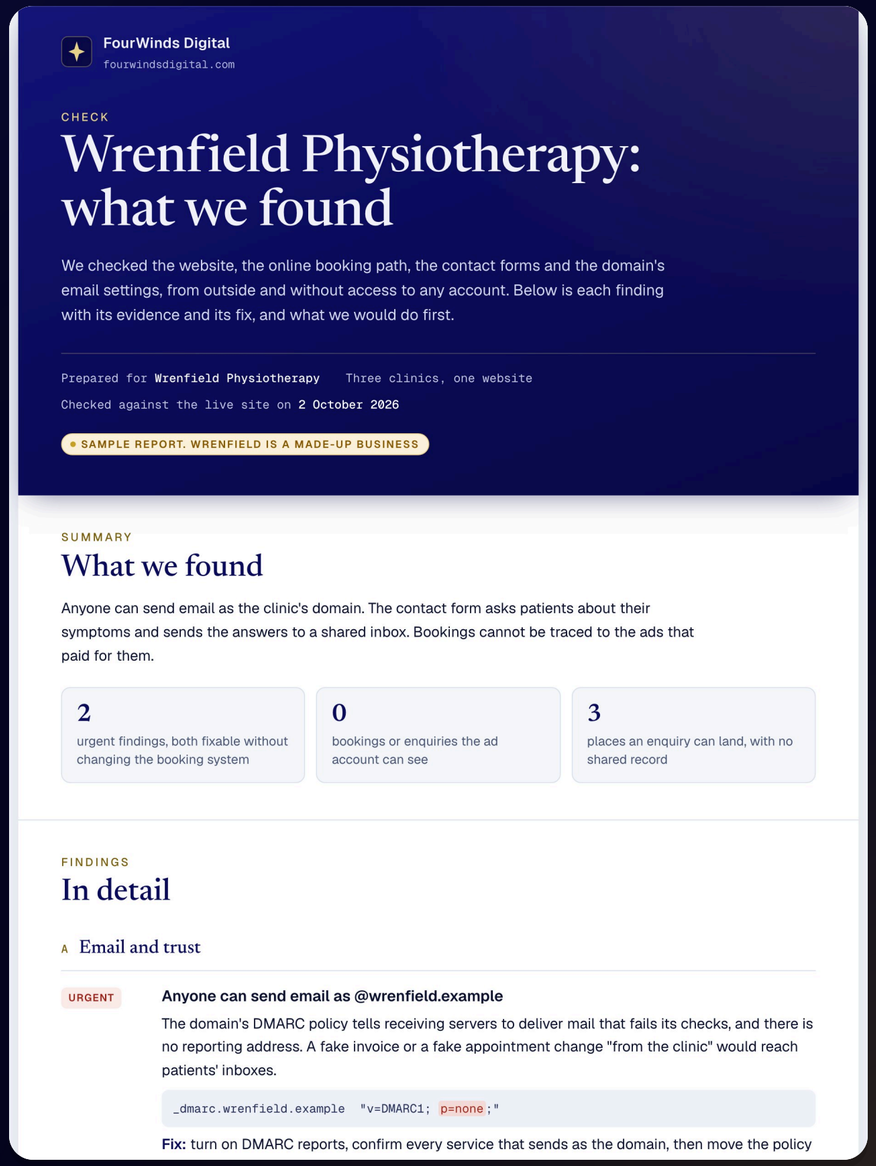

THE CHECK · TO START

A report on what *anyone* can see.

No access needed. Every finding comes with the evidence, how serious it is, and the fix.

- Email settings: whether someone else can send mail as you
- Tracking: whether a sale can be traced to the ad that brought it
- Cookie consent and your privacy notice
- Your enquiry and booking path, end to end
- Speed, search listings and accessibility basics

SAMPLE REPORT, MADE-UP BUSINESS

FourWinds Digital
fourwindsdigital.com

CHECK

Wrenfield Physiotherapy: what we found

We checked the website, the online booking path, the contact forms and the domain's email settings, from outside and without access to any account. Below is each finding with its evidence and its fix, and what we would do first.

Prepared for **Wrenfield Physiotherapy** Three clinics, one website

Checked against the live site on **2 October 2026**

SAMPLE REPORT. WRENFIELD IS A MADE-UP BUSINESS

SUMMARY

What we found

Anyone can send email as the clinic's domain. The contact form asks patients about their symptoms and sends the answers to a shared inbox. Bookings cannot be traced to the ads that paid for them.

2	0	3
urgent findings, both fixable without changing the booking system	bookings or enquiries the ad account can see	places an enquiry can land, with no shared record

FINDINGS

In detail

A Email and trust

URGENT

Anyone can send email as @wrenfield.example

The domain's DMARC policy tells receiving servers to deliver mail that fails its checks, and there is no reporting address. A fake invoice or a fake appointment change "from the clinic" would reach patients' inboxes.

```
_dmarc.wrenfield.example  "v=DMARC1; p=none;"
```

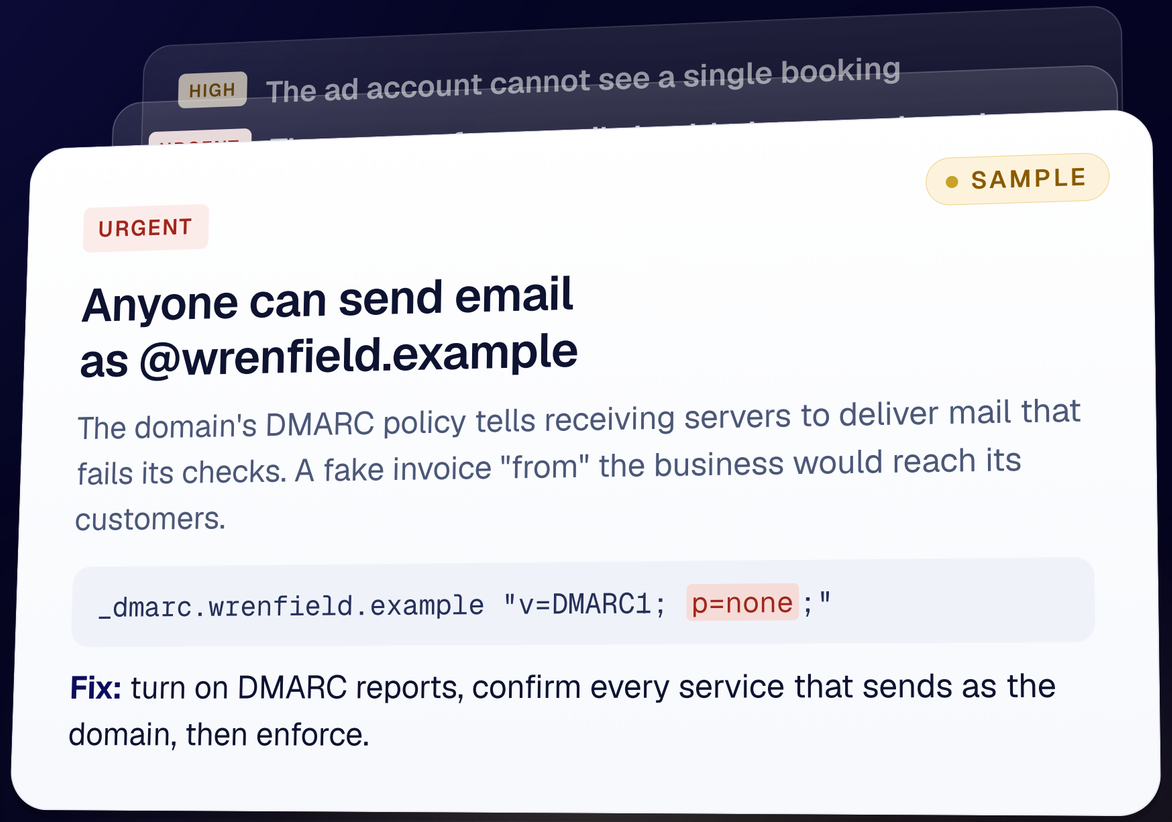

Fix: turn on DMARC reports, confirm every service that sends as the domain, then move the policy

INSIDE THE REPORT

Graded, proven, *fixable*.

Each finding says what is wrong, shows the proof read off the live system, and names the fix.

- Urgent, High or Medium
- Evidence you can check yourself
- Split by who owns the fix: us, or your supplier

HOW WE WORK

Fixed prices, on your *accounts*.

Yours, in your name

Code we write for you is yours, documented and handed over. Websites and ad accounts are built on your own accounts.

Fixed prices

Every build and every assessment is a fixed price. Run is one monthly fee.

Straight answers

If it is not something we do, we will say so and name someone who does.

A reply the next working day

Every message answered by the end of the next working day.

GET IN TOUCH

Talk to *us*.

Tell us the business and its website, and ask for a check. We reply by the end of the next working day.
